Jonathan Rozen

San Francisco, CA | 650-931-5562 | jnthnrozen@gmail.com | linkedin.com/in/jon-rozen-704573b2

Professional Summary

Software Engineer with 2+ years of experience in TypeScript, React, and Python building algorithm-heavy features and geometric/data-processing logic. Strong in testing edge cases, AI-assisted development workflows, and owning features end to end.

Experience

Software Engineer July 2024 – Present
Cisco

- Built TypeScript/React and Python tooling that models device topology and spatial network relationships, applying algorithmic and geometric reasoning to policy visualization.
- Wrote extensive tests for corner cases in parsing, validation, and geometry-adjacent code, raising coverage from 30% to 95%.
- Used AI-assisted workflows for code generation and review acceleration, with human-verified testing before every release.

Software Engineer Intern June 2023 – August 2023
Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023
Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C++
Frontend: React, Redux, canvas/SVG visualization
Engineering: Algorithms, computational geometry, data structures, edge-case testing
Tools: Git, Docker, CI/CD, AI-assisted development, Jest

Projects

Geometric Layout Engine (Cisco project) | *TypeScript, React, Python* 2026

- Built a canvas-based layout tool for Cisco rack and network diagrams with constraint solving for placement, alignment, and collision detection.
- Added unit tests for geometric edge cases and used AI-assisted iteration to explore solver designs quickly.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

Education

University of California, Santa Cruz
Bachelor of Science in Computer Science *June 2024*
