Jonathan Rozen

San Francisco, CA | 650-931-5562 | jnthnrozen@gmail.com | linkedin.com/in/jon-rozen-704573b2

Professional Summary

Software Engineer with 2+ years of experience building backend services in Java, Python, and SQL across distributed, cloud-based systems. Strong in REST and gRPC-style APIs, Kafka, data analysis with Spark, monitoring with Grafana/Prometheus, and shipping on AWS.

Experience

Software Engineer July 2024 – Present
Cisco

- Built Java/Spring Boot services processing identity and device data for network-access policy decisions, using REST APIs, validation, and audit logging.
- Developed Kafka-based event pipelines and SQL/Spark analyses to measure system behavior and experiment results across releases.
- Raised test coverage from 30% to 95%; monitored production services with Grafana and Prometheus, cutting defect-resolution time by 30%.

Software Engineer Intern June 2023 – August 2023
Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023
Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

Technical Skills

Languages: Java, Python, SQL, Scala (familiar), Ruby (familiar), TypeScript
Backend: Spring Boot, REST APIs, gRPC, GraphQL, Kafka, microservices
Data/Tools: Spark, MongoDB, PostgreSQL, Grafana, Prometheus
Platforms: AWS, Docker, Linux, Git, CI/CD, Agile

Projects

Risk Rules Evaluation Engine (Cisco project) | *Java, Kafka, SQL, Grafana* 2026

- Built a rules engine modeled on Cisco policy evaluation that scores incoming events against configurable criteria and records explainable decisions.
- Added Prometheus metrics, Grafana dashboards, and property-based tests to validate rule behavior under edge cases.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

Education

University of California, Santa Cruz
Bachelor of Science in Computer Science *June 2024*
