

Jonathan Rozen

San Francisco, CA | 650-931-5562 | jnthnrozen@gmail.com | linkedin.com/in/jon-rozen-704573b2

PROFESSIONAL SUMMARY

Software engineer with 2+ years of production experience in Python, TypeScript/React, Docker, and PostgreSQL, plus hands-on freelance experience evaluating AI systems against strict acceptance criteria. Skilled at designing realistic coding tasks with clear definitions of done, writing functional and integration tests that accept all valid solutions while rejecting incorrect ones, and iterating on evaluations from QA feedback and agent failure analysis. English: full professional proficiency (C1).

EXPERIENCE

AI Evaluation Specialist (Freelance)

May 2026 – Present

Independent AI Training Platforms

- Designed and graded coding-agent evaluation tasks: defined what “solved” means, wrote acceptance criteria, and verified that tasks were challenging yet solvable by an AI agent in a realistic environment.
- Reviewed agent solutions and analyzed failures across 40+ multi-turn evaluations and 25 evidence-grounded QA tasks, distinguishing correct-but-different approaches from genuinely incorrect ones to keep grading neither too strict nor too lenient.
- Built repeatable grading rubrics, test checklists, and reviewer handoffs for coding-agent and response-quality evaluations, iterating on tasks based on QA feedback until evaluations were fair and robust.

Software Engineer

July 2024 – Present

Cisco

- Built and tested backend services in Python and Java (FastAPI/Spring Boot style REST APIs) with PostgreSQL, Redis, and Kafka-based event flows, deployed with Docker in CI/CD pipelines.
- Wrote functional and integration tests that raised coverage from 30% to 95%; designed test suites to accept all valid implementation approaches while reliably catching regressions and incorrect behavior.
- Developed LLM-assisted engineering tooling with prompt design and output evaluation, identifying hallucinations, reasoning gaps, and unsafe suggestions before they reached production workflows.

Software Engineer Intern

June 2023 – August 2023

Paramount

- Audited machine-learning outputs in a 100+ GB nightly BigQuery pipeline and translated stakeholder expectations into traceable quality checks and acceptance criteria.

Software Engineer Intern

June 2022 – April 2023

Robert Half

- Built React/TypeScript customer-facing forms and defined acceptance criteria with product owners for consistent, testable UI behavior.

TECHNICAL SKILLS

Core Stack: Python (FastAPI, pytest), JavaScript/TypeScript (React), Docker, PostgreSQL, Kafka, Redis

Testing: functional and integration testing, acceptance criteria, test calibration, regression suites, CI/CD (Jenkins)

AI Evaluation: coding-agent task design, grading rubrics, LLM output evaluation, hallucination analysis, RLHF, QA review

Other: Java, SQL, Git, Linux, BigQuery, REST APIs, Agile; English — full professional proficiency (C1)

PROJECTS

Coding-Agent Evaluation Harness (Cisco project) | Python, Docker, PostgreSQL, pytest

2026

- Built a harness that constructs realistic developer tasks from intermediate repository states — with tickets, docs, and commit history — and grades agent solutions with functional tests.
- Iterated on task difficulty and test calibration using agent failure analysis, closing loopholes where agents could pass tests without solving the task.

Multi-Turn Evaluation Rubric Library (freelance annotation work) | RLHF, QA, Prompt Evaluation

2026

- Authored calibrated rubrics and preference rationales for multi-turn model evaluations, covering correctness, instruction following, and reasoning consistency across 375+ reviewed source pages.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
