PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building and supporting backend services, ML-assisted workflows, and cloud data integrations. Strong in Python, Java, Spring Boot, REST APIs, Docker, Google Cloud, testing, observability, distributed processing, and production troubleshooting.

EXPERIENCE

Software Engineer <i>Cisco</i>	July 2024 – Present <i>San Jose, CA</i>
- Built a concurrent Java/Spring Boot service that translates Microsoft Entra ID identity and device data into enterprise network-access policies using REST APIs, validation, structured logs, and failure recovery. - Developed a PyTorch classifier and Python data-preparation workflow that flags invalid device records before policy evaluation, reducing avoidable support cases. - Raised automated test coverage in a mature platform from 30% to 95% and supported releases by debugging customer issues across backend services and React interfaces.	
Software Engineer Intern <i>Paramount</i>	June 2023 – August 2023 <i>San Francisco, CA</i>
- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles. - Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.	
Software Engineer Intern <i>Robert Half</i>	June 2022 – April 2023 <i>San Ramon, CA</i>
- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com. - Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.	

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript, C, C++
AI/Data: PyTorch, Pandas, NumPy, LLM application patterns, BigQuery, PostgreSQL, data pipelines
Platforms: Spring Boot, REST APIs, Docker, Kubernetes, Google Cloud, React, Redis, Linux
Tools/Practices: Git, Jenkins, Jira, CI/CD, observability, unit testing, microservices, Agile

PROJECTS

AI Application Platform Prototype <i>Python, FastAPI, Docker, Kubernetes, GCP</i>	2026
- Built a platform prototype related to Cisco policy workflows that packages an ML-assisted validation service behind a documented API and deploys it as a containerized service. - Added health checks, request tracing, automated evaluation cases, and Kubernetes deployment configuration to make failures observable and repeatable.	
Multi-Threaded HTTP Server <i>C, Linux</i>	2024
- Implemented a configurable worker pool, request scheduling, and file locks to handle concurrent traffic while preserving atomic file writes.	

EDUCATION

University of California, Santa Cruz <i>Bachelor of Science in Computer Science</i>	Santa Cruz, CA <i>June 2024</i>
