PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building Python and Java backend services and data platforms: ETL/ELT pipelines, fluent SQL, data quality tooling, and self-service SDK-style interfaces. Strong with cloud data warehouses, Docker, and observability.

EXPERIENCE

Software Engineer July 2024 – Present

Cisco

- Built Python and Java services that ingest and validate identity and device data into warehouse-backed policy systems, with ETL workflows, audit logging, and failure recovery.
- Developed self-service tooling and reusable SDK-style libraries so other teams could onboard data pipelines without manual support.
- Added data-quality checks, lineage tracking, and usage auditing; raised test coverage from 30% to 95% across data services.

Software Engineer Intern June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript

Data: ETL/ELT, BigQuery, Snowflake (familiar), PostgreSQL, data quality, data modeling, lineage

Platforms: GCP, AWS, Docker, Kubernetes, Airflow (familiar)

Practices: Observability, CI/CD, testing, documentation, Agile

PROJECTS

Data Pipeline Quality and Lineage Toolkit (Cisco project) | *Python, SQL, BigQuery, Docker* 2026

- Built tooling that tracks data quality, schema changes, and lineage for Cisco telemetry pipelines, surfacing issues before downstream consumers are affected.
- Shipped cataloging and usage-audit reports plus automated validation in CI to keep datasets trustworthy.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
