PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building reliable services, telemetry and data pipelines, analytics tools, and ML-assisted quality automation. Strong in Python, SQL, Java, BigQuery, PyTorch, Docker, observability, testing, and cross-functional delivery.

EXPERIENCE

- Software Engineer** July 2024 – Present
Cisco San Jose, CA
 - Built a concurrent Java/Spring Boot service that processes Microsoft Entra ID identity and device telemetry used to enforce enterprise network-access policies; added validation, structured logs, and failure recovery.
 - Raised unit and automation test coverage in a mature platform from 30% to 95%, improving release confidence and reducing CI resource usage.
 - Developed a PyTorch classifier and Python data-preparation workflow to flag invalid device records before policy evaluation, reducing avoidable support cases.
- Software Engineer Intern** June 2023 – August 2023
Paramount San Francisco, CA
 - Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
 - Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.
- Software Engineer Intern** June 2022 – April 2023
Robert Half San Ramon, CA
 - Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
 - Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript, C, C++
Data/ML: BigQuery, PostgreSQL, MySQL, Pandas, NumPy, PyTorch, ETL/ELT, data validation
Platforms/Tools: Docker, Google Cloud, Git, Jenkins, Linux, Jira, REST APIs, Redis
Engineering: Data pipelines, telemetry, observability, anomaly detection, CI/CD, unit testing, Agile

PROJECTS

- Telemetry Data Quality and Anomaly Monitor** | *Python, PyTorch, Pandas, SQL* 2026
 - Built an observability project related to Cisco device-classification work that detects incomplete and unusual telemetry before downstream processing.
 - Produced repeatable quality reports, grouped failure patterns, and exported SQL-ready results so engineers could trace and resolve data issues.
- Multi-Threaded HTTP Server** | *C, Linux* 2024
 - Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz Santa Cruz, CA
Bachelor of Science in Computer Science June 2024
