PROFESSIONAL SUMMARY

Software engineer and AI-training specialist with a BS in Computer Science and 2+ years of production engineering experience, currently active across multiple AI data platforms. Combines strong coding ability (Python, JavaScript/TypeScript, Java, C/C++, SQL) with hands-on RLHF, model evaluation, and coding-agent assessment work: ranking and rewriting model responses, designing grading rubrics, fact-checking outputs against sources, and debugging AI-generated code. English: native/full professional proficiency.

EXPERIENCE

AI Training & Evaluation Specialist (Freelance)

May 2026 – Present

Independent AI Data Platforms

- Evaluate and rank AI model responses across coding, reasoning, and writing tasks; write calibrated preference rationales and ideal-response rewrites used as training signals.
- Review AI-generated code in Python, JavaScript/TypeScript, and Java for correctness, edge cases, and style; debug failing outputs and write functional tests that verify solutions.
- Design task instructions, grading rubrics, and gold-standard examples for coding-agent and response-quality evaluations; iterate based on QA feedback and failure analysis.
- Fact-check model outputs against source evidence across 375+ documents, flagging hallucinations, unsupported claims, and logical gaps with precise citations.

Software Engineer

July 2024 – Present

Cisco

- Build backend services in Python and Java with REST APIs, PostgreSQL, Redis, and Kafka-style event flows; deploy with Docker through CI/CD pipelines.
- Write functional, integration, and unit tests (pytest, JUnit, Jest); raised automated coverage from 30% to 95% on a mature production codebase.
- Evaluate LLM-assisted coding tools in daily engineering work — prompting, reviewing, and correcting AI-generated code, and identifying hallucinations and unsafe suggestions.

Software Engineer Intern

June 2023 – August 2023

Paramount

- Built data-quality checks over a 100+ GB nightly BigQuery pipeline and wrote Python ingestion jobs with optimized SQL schemas.

Software Engineer Intern

June 2022 – April 2023

Robert Half

- Shipped React/TypeScript frontend features with Jest tests; reduced a legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C, C++, SQL, Bash, PHP, Go (familiar)

Frameworks & Tools: React, Node.js, FastAPI, Spring Boot, Django, Docker, PostgreSQL, MySQL, Redis, Kafka, BigQuery, Git, Linux, pytest, Jest, JUnit

AI Training: RLHF, preference ranking, response rewriting, coding-agent evaluation, rubric design, prompt engineering, hallucination auditing, red-teaming, SFT data review, trajectory analysis

Domains: software engineering, computer science, data analysis, technical writing, mathematics (undergraduate), web development

PROJECTS

Coding-Agent Evaluation Harness | Python, Docker, PostgreSQL, pytest

2026

- Built a harness that constructs realistic developer tasks from intermediate repository states and grades AI-agent solutions with calibrated functional tests.

Multi-Turn Evaluation Rubric Library | RLHF, Prompt Evaluation, QA

2026

- Authored rubrics and preference rationales for multi-turn model evaluations covering correctness, instruction following, reasoning consistency, and tone.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
