PROFESSIONAL SUMMARY

Software Engineer with 2+ years designing and operating backend and distributed systems in Java, Python, and Go. Experienced with critical production services, concurrency, monitoring and alerting, REST APIs, Docker/Kubernetes, and GCP/AWS.

EXPERIENCE

Software Engineer July 2024 – Present

Cisco

- Built a concurrent Java/Spring Boot service that translates identity data into network-access policies across distributed components, with validation, audit logs, and failure recovery.
- Operated critical production services: added monitoring, alerting, and structured logging that shortened defect-resolution time by 30%.
- Raised test coverage from 30% to 95% and contributed fixes to shared internal libraries used across engineering teams.

Software Engineer Intern June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Java, Python, Go, SQL, TypeScript, C++

Systems: Distributed systems, concurrency, microservices, gRPC, REST APIs

Platforms: GCP, AWS, Docker, Kubernetes, Terraform (familiar), Linux

Practices: Monitoring/alerting, on-call, CI/CD, testing, Git, Agile

PROJECTS

Distributed Policy Event Simulator (Cisco project) | *Java, Spring Boot, Docker, SQL* 2026

- Built a simulator that generates device events at scale to exercise distributed backend behavior under normal, delayed, and invalid inputs.
- Added metrics, alerting rules, and failure-injection scenarios to validate service reliability before releases.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
