PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building distributed data pipelines and backend services in Python and Java on cloud platforms. Strong in SQL, ETL/ELT, reusable library design, code review, testing, reliability, and security of customer data infrastructure.

EXPERIENCE

Software Engineer

July 2024 – Present

Cisco

- Built a containerized Python/Java ingestion service that moves identity and device data into policy systems reliably, with validation, retries, structured logs, and failure recovery.
- Designed reusable data-validation and schema-handling libraries shared across teams; led code reviews and documented design decisions.
- Raised unit and automation test coverage from 30% to 95%, reducing production defects and supporting on-call troubleshooting for data-pipeline incidents.

Software Engineer Intern

June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern

June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, C++

Data: ETL/ELT, data pipelines, PostgreSQL, MySQL, BigQuery, schema design, data validation

Cloud: Google Cloud, AWS, Docker, Kubernetes, Linux

Practices: Distributed systems, code review, testing, CI/CD, on-call, Agile

PROJECTS

Reliable Pipeline Replay Framework (Cisco project) | Python, Docker, SQL, Google Cloud

2026

- Built a replay tool for Cisco data-ingestion workflows that re-runs failed batches with checkpointing, validation, and audit reports.
- Added data-quality checks, schema-drift detection, and scheduled jobs so pipelines recover without manual intervention.

Multi-Threaded HTTP Server (UCSC project) | C, Linux

2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
