PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building high-rate backend services in Java, Python, and Go. Strong in PostgreSQL, Redis, Kubernetes, gRPC, AWS/GCP, monitoring, and operating tier-0-style production systems at scale.

EXPERIENCE

Software Engineer July 2024 – Present

Cisco

- Built and operated high-throughput Java/Python services enforcing network-access policy, backed by PostgreSQL and Redis with careful concurrency control.
- Ran tier-0-style production services: on-call participation, monitoring/alerting, and structured logging that cut defect-resolution time by 30%.
- Raised test coverage from 30% to 95% and improved gRPC/REST API design across platform services used by multiple teams.

Software Engineer Intern June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Python, Java, Go, C++, SQL

Backend: gRPC, REST APIs, microservices, high-scale platform services

Data: PostgreSQL, Redis, Cassandra (familiar), BigQuery

Infra: Kubernetes, Docker, AWS, GCP, Linux, CI/CD, Git

PROJECTS

High-Rate Activity Feed API (Cisco project) | *Go, Redis, PostgreSQL, Kubernetes* 2026

- Built a feed-style read/write API modeled on Cisco device-activity streams, with caching, pagination, and rate limiting to sustain high request volume.
- Added load tests, latency budgets, and alerting to keep p99 performance stable under burst traffic.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
