PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building secure, user-facing services and full-stack features in Java, C++, Python, and JavaScript/TypeScript. Strong in authentication and identity integrations, REST APIs, A/B testing, metrics instrumentation, and cross-functional delivery at scale.

EXPERIENCE

Software Engineer July 2024 – Present

Cisco

- Built a Java/Spring Boot service that integrates Microsoft Entra ID identity and authentication data to enforce network-access policies for enterprise customers, with validation, audit logging, and failure recovery.
- Developed user-facing React/TypeScript workflows for configuring security policies; instrumented usage metrics and ran staged, experiment-style rollouts with product and design partners.
- Raised automated test coverage from 30% to 95% and shipped C++ tooling for policy validation, improving release confidence on a high-scale platform.

Software Engineer Intern June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, TypeScript, SQL, Lua (familiar)

Security: Authentication, identity platforms (Entra ID), OAuth2, access policy, audit logging

Web/Backend: React, TypeScript, Spring Boot, REST APIs, Node.js

Practices: A/B testing, metrics instrumentation, unit testing, CI/CD, Docker, Git, Agile

PROJECTS

Account Security Experimentation Sandbox (Cisco project) | *Java, React, OAuth2, Docker* 2026

- Built a testbed for identity-policy features that simulates authentication flows and records instrumented metrics on policy decisions.
- Added feature flags, event logging, and repeatable experiment scenarios so security UX changes could be evaluated safely before release.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
