PROFESSIONAL SUMMARY

Software Engineer with 2+ years building and operating backend services and REST APIs in Node.js/TypeScript, Python, and Java within service-oriented systems. Experienced modernizing legacy platforms into well-bounded, API-first services with AWS, Docker, CI/CD, and strong testing.

EXPERIENCE

Software Engineer July 2024 – Present

Cisco

- Built and operated backend services in Java/Spring Boot and Node.js/TypeScript powering enterprise network-access workflows, exposing REST APIs consumed by customer-facing applications.
- Migrated monolithic policy-management modules into well-bounded, API-first services with contract tests, reducing coupling and speeding up releases.
- Added event-driven processing, structured logging, and CI/CD automation with Jenkins, Docker, and AWS, raising test coverage from 30% to 95%.

Software Engineer Intern June 2023 – August 2023

Paramount

- Built a React analytics dashboard that made viewer-retention and regional engagement trends understandable across 5,000+ Paramount+ titles.
- Developed a containerized Python ingestion job that moved 100+ GB of nightly BigQuery data into a CMS and optimized SQL schemas for faster analysis.

Software Engineer Intern June 2022 – April 2023

Robert Half

- Built a reusable multi-step web application framework in React, Redux, and TypeScript for customer-facing forms on roberthalf.com.
- Added Jest tests and shipped production fixes through Git and Jenkins CI/CD, reducing the legacy Drupal/PHP backlog by more than 50%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Ruby (familiar), SQL

Backend: Node.js, Express, Spring Boot, REST APIs, microservices, event-driven design

Cloud/Tools: AWS, Docker, Jenkins CI/CD, Git, Linux, PostgreSQL, Redis

Practices: Service decomposition, API-first design, testing, observability, Agile

PROJECTS

Task Routing and Fulfillment API (Cisco project) | *Node.js, TypeScript, PostgreSQL, Docker* 2026

- Designed a REST service that matches incoming work items to policy handlers using bounded contexts modeled on Cisco device-provisioning flows.
- Added idempotent endpoints, queue-based event processing, integration tests, and dashboards tracking throughput and failures.

Multi-Threaded HTTP Server (UCSC project) | *C, Linux* 2024

- Implemented a configurable worker pool, request scheduling, and file locks to serve concurrent requests while preserving atomic file writes.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
