PROFESSIONAL SUMMARY

Training and quality specialist with 2+ years across AI data programs and software engineering, combining a computer science degree with daily hands-on experience inside RLHF, evaluation, and annotation workflows. Designs rubrics, guides, annotated examples, and assessments that turn complex technical task requirements into clear contributor instructions, and uses error-pattern and quality-metric analysis to close training gaps quickly.

EXPERIENCE

AI Training & Quality Specialist (Freelance)

May 2026 – Present

Independent AI Data Platforms

- Authored training collateral for AI data programs under tight turnaround: task guides, grading rubrics, annotated gold-standard examples, and qualification assessments that translated complex technical requirements into clear contributor instructions.
- Analyzed contributor error patterns and quality metrics across 25+ evidence-grounded QA projects and 375+ reviewed source pages, then designed targeted interventions — clarified instructions, added edge-case examples, recalibrated rubrics — that measurably reduced repeat errors.
- Coached reviewers on feedback technique and consistent rubric application through written calibration guides and worked examples, improving inter-reviewer agreement on subjective judgment tasks.
- Built reusable content templates and self-serve reference frameworks so new projects could launch with consistent training quality in 24–48 hours.

Software Engineer

July 2024 – Present

Cisco

- Created technical documentation, onboarding guides, and hands-on labs that brought engineers up to speed on AI-assisted development workflows, driving team adoption from partial to 100%.
- Designed repeatable testing and code-review playbooks with clear acceptance criteria, cutting bug time-to-resolution by 30% and standardizing quality expectations across the team.
- Explained complex distributed-systems and security-policy concepts in writing for non-specialist audiences, including support staff and customer-facing teams.

Software Engineer Intern

June 2023 – August 2023

Paramount

- Documented data-pipeline quality checks and wrote runbooks that let non-technical stakeholders interpret ML output reports without engineering help.

SKILLS

Training & Enablement: instructional design, rubric and assessment authoring, gold-standard examples, calibration guides, self-serve templates, rapid content turnaround

AI Data Methods: RLHF, SFT, model evaluation, annotation QA, red-teaming familiarity, error-pattern analysis, quality metrics

Technical: Python, SQL, JavaScript/TypeScript, annotation and evaluation tooling, data analysis, dashboards, Git

Communication: technical writing, structured thinking, simplifying complex concepts, cross-functional collaboration; English — full professional proficiency

PROJECTS

Contributor Onboarding Kit for AI Evaluation Projects (freelance work) | *Instructional Design, Rubrics*

2026

- Built a reusable onboarding kit — task guides, annotated pass/fail examples, and a self-check assessment — that cut new-reviewer ramp-up from days to hours across multiple annotation platforms.

Engineering Enablement Playbooks (Cisco project) | *Technical Writing, Quality Metrics*

2026

- Wrote playbooks and review checklists for AI-assisted coding and testing workflows; tracked adoption and defect metrics to iterate on the material until quality targets held without oversight.

EDUCATION

University of California, Santa Cruz

Bachelor of Science in Computer Science

June 2024
